Tony Cui

(929) 378-6974 | tcui3661@gmail.com | linkedin.com/in/tony-cui-729b3a326 | Brooklyn, NY

A Computer Science Student at the New York Institute of Technology. Focused on full-stack development, Security Hardening, and on-device AI.

Education

New York Institute of Technology - B.S. in Computer Science (Expected December 2027)
New York, NY
Relevant Coursework: Data Structures, Linear Algebra, Calculus, Database Management, Algorithm Design (in progress), Probability (in progress)

Skills

Languages: Java, Python, SQL, JavaScript, HTML5, CSS
Frameworks & Tools: Node.js, React, Express.js, DeepFace, Tkinter, SQLite, Git/GitHub, IntelliJ, VS Code, Linux, Google Workspace
Familiar: OpenGL, Bash

Projects

EasyVerify - Feb 2026 – Apr 2026 (https://github.com/AmeersPersonal/Easy-Verify)
- Collaborated with a team of 4 to build a fully local, privacy-focused age verification system where all verification processing happens on-device, ensuring no PII leaves the user's machine
- Engineered an on-device facial recognition pipeline using DeepFace, enabling real age verification without transmitting biometric data to external servers.
- Engineered example front-end (React/Vite) and back-end (Express.js, SQLite) services to demonstrate end-to-end system integration.
- Designed a modern user interface using Tkinter, prioritizing ease of use and clear communication of instructions.

Provenance Guard (Prototype) - Jun 2026 - Jul 2026 (https://github.com/Tohny123/ai201-project4-provenance-guard)
- Built a prototype Flask REST API (Endpoints: '/submit','/appeal'',/log') that classifies a given piece of text as either human-written or AI-generated.
- Combined a LightGBM classifier trained on StyloMetrix stylometric features from a Hugging Face dataset with an LLM-based checker via OpenRouter, returning a confidence score and transparency label, or "indeterminate" when the two signals disagree.
- Implemented SQLite logging of every analysis with UUID tracking, an appeals workflow that records user reasoning against a prior result, JSON input validation, and per-endpoint rate limiting (20 req/min) with Flask-Limiter

Experience

Aspire High Youth Development Inc. - **Technology Services Intern** - Jan 2026 – May 2026 - Remote (NYIT FWS-CS)
- Led a ground-up rebuild of the organization's 15-page WordPress site, owning architecture, security, and design decisions end-to-end.
- Built a Google Apps Script automation to provision new-employee permissions, replacing manual setup and running reliably across 5-10 onboarding cycles, saving time manually inputting employee information.
- Administered user accounts and access permissions in Google Admin Console, managing provisioning and deprovisioning for staff.
- Hardened site security by implementing a Web Application Firewall (WAF) and managing SSL configuration, reducing exposure to common web vulnerabilities.

BCS Education Center - **Intern** Jul 2026 – Aug 2026 - Brooklyn, NY
- Assisted a team of educators to audit and clean up records for ~110 adult ESL students using VLOOKUP, INDEX/MATCH, and COUNTIF to systematically flag duplicate and incomplete records.
- Built a custom Excel-based tool to standardize and normalize student data, using formulas to automatically reformat and clean inconsistent entries, reducing manual correction time.
- Cross-referenced digital records against physical source documents to verify data integrity, catching and correcting discrepancies.
